

UI Development Test

Reviews Module

For this coding test, we require a reusable reviews module to be built following the brief design and business rules included – how it's actually implemented is up to you.

Notes:

- Only the reviews module HTML should exist within the HTML body.
- Use HTML5 DOCTYPE but make sure layout renders properly in all browsers without the need for JavaScript e.g. HTML5 JavaScript shim.
- Browser support:
 - IE8+
 - Google Chrome (latest)
 - Firefox (latest)
- The design of the reviews module does not need to look the same in all browsers. We are happy for the design to degrade gracefully in older less capable browsers.
- Reviews module must be accessible e.g. cater for non-JavaScript users.
- HTML5 must be 100% valid, use: <http://html5.validator.nu/> to validate. CSS does not need to be 100% valid.
- The following images: **ratingscore-on/off.png** and **toggle-open/close.png** do not have to be used exactly how we've provided them.
